STAINLESS STEEL CONVEYOR/PACKAGING TABLE HAPPYCONDITABLE

How can **ergonomics** be integrated into packaging using reusable containers ?

The elimination of plastic in catering represents a significant contemporary issue. In accordance with the EGALIM and AGECL laws, we have explored solutions for managing and enhancing ergonomics in collective dining establishments.

The utilisation of reusable containers, such as stainless steel or glass, elevates musculoskeletal loads and disorders.

To tackle this issue, we have created handling assistance solutions, which feature an innovative modular packaging line.
