CATERING PERSONEL ARE OFTEN IMPACTED BY MUSCULOSKELETAL DISORDERS

(Musculoskeletal Disorders)

DID YOU KNOW

+98%

occupational diseases in the food industry are linked to MSDs.

+53%

sick leave is related to manual handling injuries.

€4.4 billion

cost for companies, i.e. 33% of all contributions received by occupational risk health insurance for Work Accidents/Occupational Illnesses.

Manual handling is the leading cause of work accidents.

*French figures

*Together, let's find solutions to improve your workstations by eliminating **manual handling**.*

RISING-BOTTOM SOAKING TANK HAPPYWASH

Full tilt

The HappyWash tank with a height adjustable tray/basket is ergonomically designed to make dishwashing easier. It allows you to soak dishes once you have placed them into the ingenious basket system and lowered it to the tank. This device eliminates bending, reducing physical effort and making cleaning more comfortable. By choosing the HappyWash sink, you not only improve your efficiency, but also protect your back from unnecessary strain.

SILGOM

The 200 kg stainless steel HAPPYPAT200 are essential to protect the backs of our employees, who do a fantastic job. As an employer in Dijon Métropole, the health and safety of our employees is a priority.

Stéphane DE LAZZER
Vegetable Director,
Central Kitchen, Dijon
Métropole

**HAPPYCUVAMO
SILGOM**

The equipment offered fully addresses the major challenges of the MSD industry. The manufacturing is high-quality, as is the reliability. A large proportion of the kitchen staff are currently satisfied with the equipment that HAPPYMANUT has provided us.

David DAILLON,
Director of SIVU
COCLICO

When it comes to ergonomics in school catering, the biggest challenge lies in prevention. Corrective ergonomics still needs to be strengthened, and HAPPYMANUT is supporting us by offering innovative equipment that allows for better adaptation to work for many employees, some of whom have multiple medical restrictions. It also ensures fair treatment for the distribution of tasks.

Hardware solutions related to the prevention of MSDs are very efficient and meet the expectations of users who find comfort in their work and a reduction in physical stress.
